

AgencyCRM

AI-Powered Internship Program

Curriculum & Program Guide

Duration: 10 Weeks ($\approx$ 2.5 Months) | Schedule: Monday / Wednesday / Friday | 2 Hours per Session

Total Program Time: 30 Sessions | 60 Hours — Paced for Accessibility, No Rushed Timelines

Curriculum Developed by Garrett Shiner, Desiree Adanza & Lovelyn Canillo

Founded by Garrett Shiner — a Person with a Disability (Type 1 Diabetes), building a program for other PWD builders

The Ultimate Goal

This program is not just a skills course — it is a leadership pipeline. The end goal is to find and train top-tier leaders who can personally handle every function of the business, and then build that same capability in someone else.

The full loop looks like this: an intern builds their own website, ads, and social media posts and walks away with general AI-building knowledge and real confidence. They take that confidence and sell the services to actual clients. Then they hire the next person, train them the same way, and mentor them through their own growth. Over time they build their own team, and the whole loop repeats underneath them — scaling the agency, and the number of people it helps, to the moon.

The Leadership Roadmap (Checklist)

Every graduate walks this same path. It's designed as a repeatable loop, not a one-time program — each new leader eventually runs this exact checklist for the person they hire.

Stage	What It Looks Like	Checkpoint / Proof
1. Build	Complete Phase 1 (Weeks 1–6): build your own website, ads, social posts, logo, and apps. Walk away with hands-on AI confidence and general knowledge across every builder skill — at a pace that works for you, with no crunch.	Deployed personal portfolio (live links)
2. Sell	Complete Phase 2 (Weeks 7–10): take that confidence and sell the agency's services to real clients using your own portfolio as proof.	First proposal sent / first client closed
3. Hire	Recruit and hire the next person to bring into the agency under you.	First hire onboarded
4. Train	Run your new hire through the same Build → Sell curriculum you just completed.	New hire completes their own portfolio
5. Mentor	Coach your hire 1:1 through their own growth — building, selling, and developing confidence — the way you were mentored.	Mentee closes their first client
6. Build a Team	Grow a full team of builders and sellers who report to you and run the loop themselves.	Leading a team of 2+
7. Scale	Repeat the loop across the organization — more leaders, more teams, more clients helped. This is how the agency scales to the moon.	Loop is self-sustaining under your leadership

Path 3 (Leader) in this document is this roadmap in practice. Most interns will only reach Stage 1 or 2 during the 10-week program — that's expected. The roadmap exists so every intern can see the whole staircase from day one, not just the first step.

The Founder's Story

Garrett Shiner didn't arrive at entrepreneurship the easy way. In 7th grade he started an Entrepreneur Club at his school, convincing local business owners to come speak once a month in exchange for free pizza — it grew into the largest club in the building. Through his early teens he tried, and mostly failed, at a string of ventures: dropshipping, trading in-game items, mining Bitcoin when it was worth less than \$1,000, and building an audience across half a dozen early social platforms. Every attempt taught him something, even the ones that went nowhere.

By his senior year of high school, one attempt finally worked. A single client turned into two, then three, and Shiner Marketing was born — crossing six figures within eight months. Garrett graduated having never had a job, a boss, or applied to a single college.

Then, right as he was hitting his stride at 18, his body started failing him. Over six months he lost his vision, developed muscle spasms, and dropped more than 25 pounds. He ended up in the ICU and was diagnosed with Type 1 Diabetes — an incurable disease that, left untreated, is fatal.

Learning to live with T1D forced Garrett to build a level of discipline, focus, and gratitude he'd never needed before — and instead of slowing him down, it launched him further. Within a month of leaving the hospital, he'd doubled his company's profit. Within seven months, he'd brought his blood sugar from a life-threatening level down to a healthy one. By 19, he was profiting over \$200,000 a month.

Garrett is a Person with a Disability who built a company from nothing — and this program is built in that same image. Each of the three paths retraces one leg of his journey:

- Path 1 (AI Developer) is the skill-building leg — learn to build through hands-on trial and error, the way Garrett did with his own ventures and experiments as a kid.
- Path 2 (Sales) is the confidence leg — take what you built and learn to sell it, the way one client for Garrett turned into a real company.
- Path 3 (Leader) is the teaching leg — find people, train them, and teach them to fish, the way Garrett did once the work outgrew him alone, and the same reason he's since brought Entrepreneur Club back to life for the next generation.

None of it happened at the pace it did without the discipline a disability forced Garrett to learn. AgencyCRM exists because a PWD founder built something real — and this program exists so other PWDs, and every intern who comes through it, get the same shot he did.

Program Leadership

This curriculum was developed by Garrett Shiner, Desiree Adanza, and Lovelyn Canillo.

Garrett Shiner leads the internship program overall — he sets the vision, owns the 3-path structure, and is ultimately responsible for the outcomes of the program. Desiree Adanza is second in command: she runs day-to-day delivery, coordinates the other instructors, and is interns' primary point of contact. In practice, Garrett and Desiree take the lead together across nearly every part of the program — from the AI-mindset and sales-pitch sessions to mentoring interns along the Leadership Roadmap above (Stages 3–7).

Built for Every Builder: Accessibility & Empowerment

This isn't abstract for AgencyCRM. Garrett, the program's founder, lives with Type 1 Diabetes — a disability that forced him to build extraordinary discipline just to survive, let alone build a company. This program exists because a PWD founder wants every PWD intern to have the same shot he had.

This program is intentionally designed to work as well for Persons with Disabilities (PWD) as it does for anyone else — and to give every intern the tools to build at a level that matches, or exceeds, what's possible without AI. AI removes many of the traditional barriers to building: typing speed, memorizing code syntax, and navigating complex design software all matter far less when AI is doing the heavy lifting on execution. A PWD intern who has never built a website before can walk away from this program with a live, professional website — on the same timeline as everyone else in the room.

The goal isn't to treat PWD interns as an exception to accommodate. It's to build a program where the pacing, tools, and teaching style genuinely work this well for everyone — and to prove that ability to build and lead has nothing to do with ability of body.

How the Program Supports This

- No crunch, by design. The 10-week schedule paces one clear focus per session with room to breathe — built-in breaks during each 2-hour block, and instructors who default to repeating or extending a topic rather than rushing to the next one.
- A Week 1 accommodations conversation. Before any building starts, Desiree meets one-on-one with each intern to understand what tools, pacing, or support will help them do their best work — screen readers, voice input, extra time, alternate formats, or anything else.
- Multiple ways to show mastery. A finished build can be demonstrated by live demo, voice walkthrough, or written summary — whatever works best for the intern. The deliverable is the proof, not the method used to produce it.
- AI handles the technical heavy lifting — syntax, layout, boilerplate — so interns can focus on ideas, direction, and decisions: the parts of building that have nothing to do with physical or sensory ability.
- Instructors default to patience and flexibility, not deadlines. If an individual or the whole cohort needs a session repeated or extended before moving on, that's expected — not a failure to keep up.

Every date and pace in this document is a floor, not a ceiling — instructors are expected to slow down further for any intern who needs it, even if that means a particular session or week runs longer than planned.

Program Philosophy

Every module in this program is built around one goal: using AI to break limiting beliefs. Interns don't just learn a tool — they build something real, in hours, that they didn't think they could build. “Build your first website,” “build your first logo,” “build your first app” — each is a proof point that removes the mental ceiling of “I'm not technical” or “I'm not creative.”

The program is intentionally sequenced from easiest to hardest so interns stack early wins before tackling harder technical builds (web apps, mobile apps, games). The goal in Phase 1 is breadth, not specialization — general fluency across AI-assisted building, so no one gets boxed in as “just the SEO person.” Depth comes later, once an intern's path is clear.

The curriculum is deliberately kept simple and unrushed. Sessions are paced so no one has to master a brand-new skill and ship a finished deliverable in the same breath — and instructors are expected to slow down, repeat, or extend a session whenever the group (or an individual) needs it, rather than rush to stay on the calendar.

The Three Career Paths

All interns start on the same foundation. By the end of Phase 1, each intern has visible proof of general AI-building competency. Phase 2 branches into monetization (Sales) and, for top performers, leadership. Each path trains something different at its core:

Path	Profile & Focus
1. AI Developer	Trains Skills. More technical, more introverted. Builds the agency's products and client deliverables using AI tools: websites, apps, games, creative assets, and campaigns. Owns the “how it gets made.”
2. Sales	Trains Belief & Confidence. More social, more extroverted. Takes the skills built in Path 1 and monetizes them — prospecting, outreach, auditing, proposals, closing, and delivery. Owns the “how it gets sold.”
3. Leader (Hybrid)	Trains Finding People, Training & Teaching. Reserved for top performers who show strength in both building and selling. Follows the full Leadership Roadmap: find and hire the next person, train and mentor them, build a team, and repeat the loop — becoming a leader just like Garrett did. Owns the “how it gets scaled.”

Program flow: Phase 1 (Weeks 1–6) = shared AI Developer foundation for every intern → Phase 2 (Weeks 7–10) = Sales path (monetizing what was just built) → Path 3 (Leader) is the ongoing, repeatable loop — hire, train, mentor, build a team, scale — offered after the internship to standout graduates from either path. See “The Leadership Roadmap” earlier in this document for the full loop.

Difficulty Ladder (Easiest → Hardest)

Builds are sequenced in this order so interns gain confidence before tackling the technically hardest projects:

- Social Media Post → Email Template → SMS Campaign (content, lowest technical lift)
- Flyer → Logo → Advertising Campaign / Ad (design & creative, moderate lift)
- Website (first real code + deployment pipeline)
- Web App (logic, data, interactivity)
- Mobile App / Video Game (highest technical lift — hardest by team consensus)

Program Structure at a Glance

Phase 1 (Weeks 1–6) — Path 1: AI Developer Foundation (All Interns) — Trains Skills

Every intern, regardless of eventual path, completes this foundation at a pace built for confidence, not speed. Interns leave Phase 1 with a live portfolio: a deployed website, a working web app, at least one mobile app / game prototype, and a folder of AI-generated marketing collateral.

Phase 2 (Weeks 7–10) — Path 2: Sales & Monetization — Trains Belief & Confidence

Interns shift from builder to seller, walking the full client pipeline end to end: setting up a professional profile, prospecting and enriching a lead list, cold calling to sell the meeting (not the product), auditing a prospect's setup, building relationship and access for a deeper audit, assembling a proposal, negotiating and getting it signed, then collecting payment and handing off delivery to a project manager — using the very portfolio they built in Phase 1 as proof of capability.

Optional Path 3 — Leader Track (Post-Program) — Trains Finding People, Training & Teaching

Offered to top graduates who show strength across both paths. Not part of the 10-week core schedule; introduced at graduation and run as an ongoing loop: find and hire the next person, train them on this same curriculum, mentor them through their own build-and-sell journey, and build a team — repeating the cycle to scale the agency, the way Garrett did once his own client work outgrew him. See “The Leadership Roadmap” earlier in this document.

Weekly Curriculum Breakdown

Phase 1: AI Developer Foundation (Weeks 1–6)

Week 1 — Foundations: Mindset, Tools & Accessibility

Week	Day	Session Focus	Deliverable / Outcome	Lead
1	Mon	Orientation & the AI Mindset — program overview, the 3 career paths, breaking limiting beliefs, how AI is a genuine equalizer that lets every builder, including PWD interns, build at a professional level	Personal goals doc: which path sounds like you, and why	Garrett & Desiree
1	Wed	Intro to the AI stack — Whitelabel IDE + Whitelabel CLI setup, environment install, first AI prompt-to-code exercise	IDE/CLI installed and working on personal machine	Garrett / Krischan
1	Fri	Running projects locally; APIs & Keys 101, plus a brief 1:1 Accommodations Check-In with each intern on preferred tools, pacing, or support	First app running on localhost; personal .env file set up correctly; accommodations noted	Desiree / Krischan

Week 2 — Easy Wins: AI Content Builds

Week	Day	Session Focus	Deliverable / Outcome	Lead
2	Mon	Build Your First Social Media Post — AI copy + AI image generation, brand voice basics	1 finished, on-brand social post (image + caption)	Desiree / Lovelyn
2	Wed	Build Your First Email Template — AI-drafted copy, layout, responsive basics	1 working HTML email template	Desiree
2	Fri	Build Your First SMS Campaign — short-form AI copywriting, compliance basics (opt-in/opt-out)	3-message SMS campaign sequence	Desiree

Week 3 — Design & Advertising Builds

Week	Day	Session Focus	Deliverable / Outcome	Lead
3	Mon	Build Your First Flyer — AI design tools, layout hierarchy, print vs. digital sizing	1 finished flyer (PDF + editable file)	Desiree / Lovelyn
3	Wed	Build Your First Logo — AI logo generation, iteration, vector export basics	1 finished logo with 2 color variations	Desiree / Lovelyn
3	Fri	Build Your First Advertising Campaign / Ad — concept scoring, ad copy + creative, platform targeting basics	1 complete ad concept (creative + copy + target audience)	Garrett / Desiree

Week 4 — Version Control & Deployment Pipeline

Week	Day	Session Focus	Deliverable / Outcome	Lead
4	Mon	Intro to GitHub — repos, commits, keys, and the Whitelabel GitHub Org structure, taught in plain language	Personal repo created inside the Whitelabel GitHub Org	Garrett / Krischan
4	Wed	Hands-on pushing practice — branches, commits, pull requests, resolving basic conflicts	First successful push + PR merged	Garrett / Krischan
4	Fri	Intro to Vercel — connecting a repo to Vercel, environment variables, first production deploy	1 live shareable link on Vercel	Garrett / Krischan

Week 5 — Build Your First Website

Week	Day	Session Focus	Deliverable / Outcome	Lead
5	Mon	Website planning — sitemap, content, AI-assisted design brief	Website wireframe / content outline	Garrett / Krischan
5	Wed	AI-assisted build — generating pages, styling, responsive layout, at a comfortable pace	Working multi-page website (local)	Garrett / Krischan
5	Fri	Push to GitHub Org → Deploy to Vercel → share the live link	Live, deployed personal website with shareable URL	Krischan / Desiree

Week 6 — Build Your First Web App & Mobile App / Game

Week	Day	Session Focus	Deliverable / Outcome	Lead
6	Mon	Build Your First Web App (Part 1) — planning functionality, data, and user flow with AI assistance	Working app skeleton with core feature planned	Garrett / Krischan
6	Wed	Build Your First Web App (Part 2) — finishing functionality, testing, deploying	Live deployed web app	Garrett / Krischan
6	Fri	Build Your First Mobile App / Video Game — intro build (choose one based on interest), AI-assisted prototyping	Working prototype (app or playable game demo)	Garrett / Krischan

Phase 2: Sales & Monetization (Weeks 7–10) — Trains Belief & Confidence

Path 2 is not just “learn to sell.” It’s the full client pipeline, start to finish — the same one Garrett walked himself once he had the confidence to sell his own skills. Each stage below builds on the last.

Week 7 — Confidence & Your Professional Presence

Week	Day	Session Focus	Deliverable / Outcome	Lead
7	Mon	Intro to Path 2 — this path trains Belief & Confidence, not just tactics; why the Phase 1 portfolio is now proof you can point to	Personal portfolio 1-pager (all Phase 1 builds compiled)	Garrett & Desiree
7	Wed	Setting Up Your Profiles — professional contact info, LinkedIn profile, and resume/bio built to reflect what you can actually do	LinkedIn profile, resume, and contact info finalized	Desiree / Lovelyn
7	Fri	Prospecting Fundamentals — how to find leads and build a lead list	Lead list of 10 prospects	Desiree / Lovelyn

Week 8 — Outreach & Discovery

Week	Day	Session Focus	Deliverable / Outcome	Lead
8	Mon	Enriching Your Data — turning a raw lead list into a usable one: contact details, context, and relevant background on each prospect	Enriched lead list (10 prospects with full context)	Desiree / Lovelyn
8	Wed	Cold Calling — sell the MEETING, not the product or service. Scripting, tone, and objection basics	Personal cold-call script; 1 practice call roleplayed	Garrett & Desiree
8	Fri	The First Audit — how to properly audit a prospect’s current setup once they say yes to a meeting	1 completed sample audit	Garrett & Desiree

Week 9 — Relationship, Access & the Deeper Audit

Week	Day	Session Focus	Deliverable / Outcome	Lead
9	Mon	Building Relationship & Progressing to Deeper Access — how trust turns a first meeting into real visibility into the prospect’s business	Relationship-building plan for 1 live or practice prospect	Garrett & Desiree
9	Wed	The Deeper Audit — using that deeper access to find the real opportunity, not just the surface-level one	1 completed deeper audit	Garrett & Desiree
9	Fri	Practice Lab — run the full discovery-to-audit sequence once more, with feedback	Discovery + audit sequence rehearsed end to end	Garrett & Desiree

Week 10 — The Deal, the Close & the Delivery Handoff

Week	Day	Session Focus	Deliverable / Outcome	Lead
10	Mon	Building the Deal — putting together a proposal / bid based on the audit	1 draft proposal built from a real or practice audit	Garrett & Desiree
10	Wed	Revising & Signing — handling requested changes, sending the final version, and getting it signed	Finalized, signed practice proposal	Garrett & Desiree
10	Fri	Collecting Payment, Delivery & Capstone — how money is collected, how a project manager is assigned, and how client communication works during delivery; then Capstone Showcase, graduation, and intro to optional Path 3 (Leader)	Full pipeline walkthrough presented (profile → prospect → audit → deal → signed → delivered); path placement decision	Garrett / Desiree / Krischan / Lovelyn

Assessment & Path Placement

Because Phase 1 is shared across all interns, placement into Path 2 (Sales) vs. continued deep specialization in Path 1 (AI Developer) happens at the end of Week 6, based on:

- Portfolio quality — does the website / app / campaign actually work end-to-end (built, pushed, deployed)?
- Engagement pattern — did the intern gravitate toward building/technical problem-solving, or toward pitching/communicating their work to others?
- Instructor sign-off — Krischan (technical builds) and Garrett/Desiree (creative & communication builds) each flag standout interns.

Path 3 (Leader) is not assigned during the 10-week program — it is offered afterward to graduates who performed strongly in both the technical and sales weeks.

Instructor Assignments

Path	Profile & Focus
Garrett Shiner (Founder)	Founder of AgencyCRM and leader of the internship program overall — sets vision, owns the 3-path structure, leads AI-mindset and sales-pitch sessions, and is ultimately responsible for program outcomes. Lives with Type 1 Diabetes himself, which is the personal story behind why this program is built for PWD builders. Co-leads the Leadership Roadmap (Stages 3–7) with Desiree.
Desiree Adanza	Second in command and the main facilitator of the internship — runs day-to-day delivery, coordinates the other instructors, leads the Week 1 accommodations check-ins, and is interns' primary point of contact. Also leads content & creative builds (social, email, SMS, flyer, logo), day-to-day account management, and sales process. Garrett and Desiree take the lead together across nearly every part of the program.
Krischan Balasbas	All technical modules: IDE/CLI setup, APIs & keys, GitHub Org, pushing/pulling, Vercel deployment, website, web app, mobile app/game builds.
Lovelyn Canillo	Content & creative builds support, day-to-day account management (social scheduling, lead gen, SEO), HR/onboarding for internship cohort.

Note: Desiree has flagged that she and Lovelyn are still building confidence with the GitHub push → Vercel deploy workflow (currently working locally). Weeks 4–5 are structured so Krischan leads those sessions directly, with Desiree and Lovelyn learning alongside interns rather than teaching that portion solo.

Materials & Access Checklist (Provide Before Week 1)

- Whitelabel IDE license/access for each intern
- Whitelabel CLI installer + setup docs
- Whitelabel GitHub Org invite for each intern
- Vercel team access / project seat for each intern
- Shared API key vault or .env template (never commit real keys to a repo)
- Brand assets & voice guide (for logo, flyer, ad, and social modules)
- Sample client brief (used across all builds so every project has a real-feeling brief)
- Accessibility tools & accommodations identified in each intern's Week 1 check-in (e.g., screen-reader-compatible materials, extended time, alternate formats, interpretation support)
- LinkedIn + resume template for Path 2 profile setup (Week 7)

- Prospecting / lead-list tool and a data enrichment tool or process (Weeks 7–8)
- Cold-call script template and a sample audit checklist (Week 8)
- Sample proposal / deal template and an e-signature tool (e.g., DocuSign or PandaDoc) (Week 10)
- Payment collection / invoicing setup and a project-manager handoff template for closed deals (Week 10)
